Keep hot 6-12 hour

Keep cold < 12 hour

The diagram illustrates the NewPlanet architecture. It shows a sequence of input blocks (represented by rectangles) and a processing block (represented by a rectangle with a blue line). The input blocks are arranged in two rows: the top row contains 10 blocks, and the bottom row contains 10 blocks. The processing block is located below the input blocks, with a blue line indicating a specific path or output. The label "NewPlanet" is positioned to the left of the input blocks.
